Langenthal, November 2006

### **Adoption of 15-digit part numbers in accordance to ATA Spec 2000**

Dear Ladies and Gentlemen

To streamline supply chain logistics and comply with the latest e-Commerce standards, Lantal has decided to introduce 15-digit part numbers in accordance to ATA Spec 2000 alongside our in-house article numbers.

Part numbers will be consecutively assigned to our products, so a number of weeks may elapse before the dual numbering system is in place. Both number formats will be mentioned in all correspondence, quotations, order confirmations, delivery slips, invoices, routing cards, and all sample and product identification media.

Thereafter, we would appreciate your gradually adopting the new 15-digit part numbers for all your transactions with Lantal. The downloadable comparison table (partnumbers.pdf) at [www.lantal.com](http://www.lantal.com) under news will be constantly updated, giving you a convenient cross reference to any Lantal article numbers you might be using. If you have any questions in this context, please do not hesitate to contact Lantal's customer service.

We highly appreciate your cooperation in this matter and look forward to the continued privilege of serving you.

Yours truly,

Lantal Textiles
